Research Interests

The aim of my research is to democratize data and data-driven systems towards boosting productivity and enhancing transparency. To this end, my research focuses on three key aspects of data system democratization: *enhancing usability* of data systems for both non-experts and experts, *providing explanation frameworks* to enable understanding of system behavior, and *achieving trust and fairness* in data-driven machine learning.

- *Data systems usability*: query by example, data summarization, data discovery, data-wrangling recommendation, data evolution.
- *Metadata management and its applications*: data constraints, data drift, data cleaning.
- *Systems for machine learning and AI*: trusted machine learning, fair machine learning, explainable AI, personalized text summarization, large language models for data wrangling.
- *Causal reasoning and explanation frameworks*: software debugging, automatic program repair, data debugging, explaining data non-conformance.
