## Research Interests

My research focuses on various aspects of data system democratization: *enhancing usability* of data systems for both non-experts and experts, building *recommendation systems* for various data-management tasks, and *providing explanation frameworks* to enhance data and systems understanding.

- *Data systems usability*: data discovery, data evolution, data insights, data ingestion, query by example.
- *Recommendation systems*: data summarization, data wrangling.
- *Causal reasoning and explanation frameworks*: software debugging, automatic program repair, data debugging, explaining data non-conformance, causal insights.
- *Others*: data constraints, data cleaning, trusted machine learning, fair machine learning, personalized text summarization, large-language models for data management.
